

Best Training Provider of the Year Awarded By The Golden Globe Tiger Awards – 2018 Kuala Lampur, Malaysia

World HRD Congress has awarded for Excellence in Training (Asia)

ISO/IEC 27001:2013 Certified Information Security Management System

### **Understanding core programming**

Understand computer storage and data types

 How a computer stores programs and the instructions in computer memory, memory stacks and heaps, memory size requirements for the various data storage types, numeric data and textual data

Understand computer decision structures

 Various decision structures used in all computer programming languages; If decision structures; multiple decision structures, such as If...Else and switch/Select Case; reading flowcharts; decision tables; evaluating expressions

Identify the appropriate method for handling repetition

• For loops, While loops, Do...While loops and

recursion Understand error handling

Structured exception handling

# **Understanding object-oriented programming**

Understand the fundamentals of classes

 Properties, methods, events and constructors; how to create a class; how to use classes in code

Understand inheritance

• Inheriting the functionality of a base class into a derived class

Understand polymorphism

• Extending the functionality in a class after inheriting from a base class, overriding methods in the derived class

#### Understand encapsulation

 Creating classes that hide their implementation details while still allowing access to the required functionality through the interface, access modifiers

### **Understanding general software development**

Understand application life cycle management

• Phases of application life cycle management, software testing

Interpret application specifications

 Reading application specifications and translating them into prototypes, code, select appropriate application type and components

Understand algorithms and data structures

 Arrays, stacks, queues, linked lists and sorting algorithms; performance implications of various data structures; choosing the right data structure

### **Understanding web applications**

Understand web page development

• HTML, Cascading Style Sheets (CSS), JavaScript

Understand Microsoft ASP.NET web application development

 Page life cycle, event model, state management, client-side versus server-side programming

Understand web hosting

 Creating virtual directories and websites, deploying web applications, understanding the role of Internet Information Services

#### Understand web services

 Web services that will be consumed by client applications, accessing web services from a client application, SOAP and Web Service Definition Language (WSDL)

### **Understanding desktop applications**

**Understand Windows apps** 

 UI design guideline categories, characteristics and capabilities of Store Apps, identify gestures

Understand console-based applications

Characteristics and capabilities of console-based applications

**Understand Windows Services** 

• Characteristics and capabilities of Windows Services

## **Understanding databases**

Understand relational database management systems

 Characteristics and capabilities of database products, database design, Entity Relationship Diagrams (ERDs), normalisation concepts

Understand database query methods

• Structured query language (SQL), creating and accessing stored procedures, updating data and selecting data

Understand database connection methods

 Connecting to various types of data stores, such as flat file; XML file; in-memory object; resource optimisation
